The nucleotide sequence of this BAC clone was generated by combining Monsanto and RGP-Japan sequencing data.

NOTE: It currently consists of 1 contigs daps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the Fleces is believed to be correct as given, however the sizes of the Japs between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draff' sequence.

NOTE: It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is a valiable and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.

REFERENCE

Data from AC092170 and AC064870 was used to finish this clone, AC019057. Polymorphisms exist between RP11-121A1, RP11-814G20, and RP11-575E20. EXAMPLES RP11-575E20. LOCALION/QUALIFIERS 1. 186896 1. 186896 2. 1. 186896 2. 2. 1. 186896 2. 2. 2. 2. 2. 2. 2. 2. 2. 2. 2. 2. 2. 2	This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest. MAPPING INFORMATION: Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc SOURCE INFORMATION: The RRCI-11 human BAC library was made from the blood of one male donor, as described by Oscegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell park Cancer Institute (http://bacpac.med.buffalo.edu) VECTOR: pBACe3.6 NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the left is RP11-814G2O; the clone sequenced to the right is RP11-175PEDO, 2000 bp overlap. Actual start of this clone is at base position 1 of RP11-121A1; actual end is at base	AUTHORS TITLE Direct Submission TITLE Submitted (09-JAN-2002) Department of Genetics, Washington University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA COMMENT COMMENT CONTROL On Sep 19, 2001 this sequence version replaced gi:15144336.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1323
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, used for detecting presence of prostate cancer, stage of prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; prostate pharmacogenomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 295 BP; 72 A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim
                       Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, used for detecting presence of prostate cancer, stage of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABV35332;

(I) is useful for:
(a) assessing whether a patient is afflicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate
                                                                                                                                                                                                                                                                                                                                                                                        25-MAY-2000;

proteins, called pancreatic cancer antigens, given in AAB54008 to AAB54466. The human pancreatic cancer antigens have cytostatic, neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, gynaecological, cardiant and antiinflammacory activities, and can be us in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1323
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            pancreatic cancer antigen polynucleotides can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage analysis, tissue identification and/or typing and a variety of forensic and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal or proliferative disorders. CC human secreted proteins given in AAy87064 to AAY8723. Human secreted CC protein can have activities based on the tissues and cells the genes are CC expressed in. Examples of activities include: cytostatic; CC immunosuppressive; anttinflammatory; nootropic; neuroprotective; and CC antiallergic. The polynucleotides and their corresponding secreted CC polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions CC can be diagnosed by determining the amount of the new polypeptides in a CC sample or by determining the protein s and their polynucleotides can be used for developing products for the diagnosis or treatment of cancer, CC tumours, neurodegenerative disorders, developmental abnormalities and CC foetal deficiencies, blood disorders, developmental abnormalities and CC allergies, Alixheimer's disease, behavioural disorders, schizophrenia, CC allergies, Alixheimer's disease, behavioural disorders, schizophrenia, CC transplant rejection, diabetes, asthma, sepsis, acne, psoriasis, CC transplant respections, diabetes, asthma, sepsis, acne, psoriasis, CC asidovascular disorders, reproductive disorders, gastrointestinal CC proteins or polynucleotides can also be used as food additives or preservatives. The proteins are also useful for identifying their of the proteins are also useful for identifying their first the proteins are food additives or proteins are food additives or proteins or polynucleotides of the protein of the protein are sequence used in the protein and protein and protein are sequence used in the protein and protein are sequence used in the protein are also useful for identifying their and the protein are also useful for identifying their and the protein are protein and anyering are sequence used in the protein are sequence used in the protein are protein and anyering are sequence used in the protein and protein anyering any protein and anyering anyering and anyering any protein any protein anyering anyering an

A AAD11630-AAD11721 represent cDNAs corresponding to 71 human secreted correction genes, and AAE060132 represent the proteins they encode. AAE06133-AAE06205 represent human secreted proteins fragments.

AAE06133-AAE06205 represent human secreted protein fragments.

AAE06133-AAE06205 represent human secreted protein fragments.

AAE06133-AAE06205 represent human secreted protein fragments.

CC AAE06133-AAE06205 represent human secreted protein fragments.

CC Pathological conditions and their genes are useful for preventing, treating correction in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 71 genes, correctly in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 71 genes, correctly disorders, for the diagnosis or treatment of proliferative correctly for the diagnosis or treatment of proliferative correctly for the diagnosis or treatment of proliferative consisting the protein and force of diseases (e.g., rheumaroid arthritis), inflammation, Allergies, conjuders (e.g., rheumaroid arthritis), inflammation, allergies, conjuders, epsis, diabetes, atherosolerosis, cardiovascular disorders, conjuders, endocrine disorders, skinney disorders, gastrointestinal disorders, correctly expressed, proteins can also be used to ald wound healing and epithelial cell correctly correctly of the invention can be used to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding correction of the invention can be used an alleviating symptoms associated correction of the invention can be used an alleviating symptoms associated correction of the invention can be used in alleviating symptoms associated correction of the invention can be used in alleviating symptoms associated correctly expressive or correctly expressive described protein encoding cDNA of the force of the protein of the correctly ex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page 737-738; 864pp; English

04-APR-2002 WO200226931-A2

```
CC The invention relates to an isolated nucleic acid molecule (or its C fragment, homologue complement or allelic variant) encoding a human CC secreted protein (and its fragment, domain, epitope, variant, secreted CC form and species variant). Also included are a recombinant vector CC comprising the nucleic acid, a recombinant host cell comprising the vector, an antibody against the secreted protein, a recombinant host cell comprising the cC vector, an antibody against the secreted protein, a recombinant host cell comprising the cC prevent, diagnose, treat or ameliorate a medical condition in e.g. CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep CC for example autoimmune diseases e.g. rheumatoid arthritis, cC hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, verebrovascular disorders e.g. cardiac arrest, verebrovascular disorders e.g. cardiac arrest, viruses and fungi and coular disorders are listed in the specification. Many other diseases and fungi and coular disorders are listed in the specification. The polypeptides can also be used as a food additive or prevent consumers. The polypeptides can also be used as a food additive or consument of the present consumers and of the invention. The present consumers and of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        vasotropic; cerebroprotective; nootropic; neuroprotective; antibacterial; virucide; fungicide; opthalmalogical; autoimmune disease; neoplasm; rheumatoid arthritis; hyperproliferative disorder; cardiac arrest; cardiovascular disorder; cerebrovascular disorder; cerebral ischaemia; angiogenesis; nervous system disorder; alzheimer's disease; infection; ocular disorder; corneal infection; wound healing; skin aging; epithelial cell proliferation; food additive.
                                                                                  Novel 71 isolated secreted polypeptides and polypucleotides encoding the polypeptides, useful for treating Huntington's disease, sepsis, meningitis, thrombocytopaenia, haemolytic anaemia, rheumatoid arthritis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             25-SEP-2000; 2000US-234925P.

AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37130 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 2; Fig 49; 773pp; English.

coding for human PRO1265 (UNQ036) (see AAVD6480). The clone was isolated from an adenoid tissue library. Amplification of DNA60764 on chromosome 19 occurs in various lung and colon tumours and cell lines, suggesting a significant role in tumour formation and growth. Antagonists (e.g. antibodies) directed tot pRO1265 are expected to find use in cancer therapy. The invention identifies 14 genes (see AAX87254-67) that are amplified in the genome of tumour cells. Such the gene product and to contribute to tumorigenesis. The encoded proteins (see AAX6477-90) may be useful targets for the diagnosis and/or treatment (including prevention) of certain cancers, and may act as predictors of the prognosis of tumour treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PRO201; PRO292; PRO327; PRO1265; PRO344; PRO343; PRO347; PRO357; PRO715; PRO1017; PRO1112; PRO509; PRO853; PRO882; tumour cell; tumourigenesis; cancer; neoplastic cell growth; cell proliferatio

The specification describes novel polypeptides designated PRO201, PRO292, PRO327, PRO1265, PRO344, PRO343, PRO347, PRO315, PRO1017, PRO1112, PRO509, PRO853 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and proliferation in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1787

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAS21244-AAS21518 encode for novel human secretory and transmembrane CC PRO polypeptides. The PRO polypeptides are useful to detect other CC PRO polypeptides, to modulate biological activities of cells expressing CC PRO polypeptides, to modulate biological activities of cells expressing CC PRO polypeptides, and to detect the presence of mammalian lung, colon, CC breast, prostate, rectal, cervical or liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. CC some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation or CC gene expression in pericyte cells, the release of proteoglycans from CC artilage, the proliferation of inner ear utricular supporting cells or of T-lymphocytes, the release of a cytokine from peripheral blood CC monocytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by Sekeletal muscle cells or by adipocytes; or inhibit binding of A-peptide CC molecules involved in binding interactions. The polypucleotides encoding CC pRO polypeptides can be used to generate probes, antisense RNA/DNA, CC transgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                밁

New PRO polypeptides for treating immune related and infiammatory diseases such as rheumatoid arthritis, systemic vasculitis, asthma. autoimmune hemolytic anemia, and diabetes mellitus

Claim 2; Fig 1; 118pp; English

The present sequence is a cDNA (DNA60764-1533 clone) encoding PR01265 CC protein. PRO protein, its agonist or antagonist or its antibody which cc are capable of enhancing or inhibiting the proliferation of "lymphocytes co or of increasing the infiltration of inflammatory cells into a tissue care useful in the diagnosis and treatment of immune-related diseases cc in mammals. The PRO protein is useful for treating systemic lupus crythematosis, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, spondyloarthropathy, systemic sclerosis, idiopathic carthritis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, cc inflammatory myopathy. Sjoyren's syndrome, systemic vasculitis, clabetes mellitus, immune-mediated renal cisease, ce thyroiditis, diabetes mellitus, immune-mediated renal cisease, co demyelinating disease of the central or peripheral nervous system, cc disease, infectious or autoimmune chronic active hepatitis primary co disease, infectious or autoimmune chronic active hepatitis, primary co disease, infectious or autoimmune chronic active hepatitis, primary co disease, autoimmune commune such as bullous cc sin disease, erythema multiforme and contact dermatitis, psoriasis, cc allergic diseases such as such as bullous such as eosinophilic pneumonias, idiopathic pulmonary fibrosis, hyperconsitivity and urticaria, immunologic diseases such as bullous consitivity and urticaria, immunologic diseases such as bullous consistivity and urticaria, immunologic diseases of the lung consistiv

They may also be used used in turn usef transgenic animals or knockout animals which are in turn usef development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.

The present sequence is one of twenty eight nucleic acids encoding PRO polypeptides. The PRO polypeptides and their agonists, including antibodies, peptides, and small molecule agonists, may be used to treat various tumours, e.g., cancers such as breast cancer, ovarian cancer, renal cancer, colorectal cancer, uterine cancer, prostate cancer, lung cancer, bladder cancer, central nervous system cancer, melanoma or leukaemia. They are also useful for treating other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, 'stromal and blastocoelic disorders, and inflammatory, anglogenic and immunological disorders.

to treat

Claim 20; Fig 23; 188pp; English.

Twenty eight nucleic acids encoding PRO polypeptides for treating various tumors, e.g. breast cancer, and inflammatory, angiogenic and immunological disorders

                                                                                                                                                                                                                                                                                                                                                                                                                          1324 TTTTCGGAAAAAAAAAAAAAAAAAAAAAAAA 1354
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                One hundred and eighty seven nucleic acids encoding PRO polypeptides, useful in diagnosis and treatment of cardiovascular (e.g. myocardial infarction), endothelial or anglogenic disorders in a mammal -
